

Production vs prosal — number check

Dr. Yujin Kim, DVM, PhD · URvet Care · prepared September 23, 2026

What was written in the original thread: Amy: “\$250 per hour per diem and whatever production you decided.” Evan: “23 percent.” That is hourly *plus* 23% of Gross.

What Evan is saying now: “23% of Gross less the \$250/hour. You get the higher, or the delta. Difference paid quarterly. No negative accrual. Cremation paid to a third party is out.” That is prosal, not additive production.

THE TWO FORMULAS

Name	Formula	When you get extra money
A. Production (your invoices)	Hourly + (23% × Gross, positives only)	Any positive Gross adds pay
B. Prosal (Evan now)	max(Hourly, 23% × Gross) — or Hourly each period, then quarterly max(0, 23%Gross – Hourly)	Only if 23% × Gross beats the hourly already paid

YOUR ACTUAL SHIFTS

Period	Hourly paid	Kim Gross	23% × Gross	A. Hourly + 23%	B. Prosal / delta	Gap if they use B
Sep 8–15 Roslyn	\$8,900.00	\$10,326.32	\$2,375.05	\$11,275.05	\$8,900.00	–\$2,375.05
Sep 19 Midtown 8p–12a	\$1,000.00	\$598.64	\$137.69	\$1,137.69	\$1,000.00	–\$137.69
Both invoices	\$9,900.00	\$10,924.96	\$2,512.74	\$12,412.74	\$9,900.00	–\$2,512.74

Under B, 23% × Gross is below hourly on both periods, so the quarterly “difference” is \$0. You would be paid hourly only.

GROSS NEEDED BEFORE ANY PRODUCTION SHOWS UP UNDER PROSAL

Shift	Hourly	Gross needed (Hourly ÷ 0.23)	Your Gross	% of threshold
Roslyn Sep 8–15	\$8,900.00	\$38,695.65	\$10,326.32	27%
Midtown 4 hours	\$1,000.00	\$4,347.83	\$598.64	14%

That is why Evan says additive 23% “creates a huge loss.” It is a different deal than “\$250 and 23%.”

OTHER POINTS FROM THE TEXTS

Quarterly production: they can pay the \$250/hour on the regular ADP cycle and true-up production later. That is a timing issue, not a formula change.

No negative accrual: if 23% × Gross is under hourly, they do not claw back the hourly. That only matters under prosal.

Cremation / third-party euthanasia: if that is in Kim Gross, take it out of the 23% base. Need the line items from them to adjust the \$10,326.32 / \$598.64.
