Dr. Kim,

Thank you for your patience while acquiring the requested information. Below is an overview of how ProSal compensation works at URVet Care.

What is ProSal?

ProSal combines a guaranteed base salary with the opportunity to earn additional income through production. Each quarter, your production is calculated as a percentage of your doctor-driven revenue. If that amount exceeds the base salary already paid for the quarter, the difference is paid out as a production bonus.

Your base salary is always guaranteed. URVet Care does not use negative accrual, so a slower quarter never reduces your base pay or carries a deficit into the next quarter. Production bonuses are paid quarterly. This model is common across both private and corporate veterinary practices.

Example 1: Production bonus earned

- Base rate: \$250/hour
- Production rate: 23%
- Hours worked in the quarter: 100
- Doctor-driven revenue: \$150,000

Production amount: $23\% \times \$150,000 = \$34,500$

Base salary paid for the quarter: $100 \text{ hours} \times \$250 = \$25,000$

Production bonus: $\$34,500 - \$25,000 = \$9,500$

Total compensation for the quarter: $\$25,000 \text{ base} + \$9,500 \text{ bonus} = \$34,500$

Because the base salary is an advance on production, it is subtracted from the production amount so the same earnings aren't paid

twice.

Example 2: No production bonus earned

- Base rate: \$250/hour
- Production rate: 23%
- Hours worked in the quarter: 100
- Doctor-driven revenue: \$100,000

Production amount: $23\% \times \$100,000 = \$23,000$

Base salary paid for the quarter: $100 \text{ hours} \times \$250 = \$25,000$

Difference: $\$23,000 - \$25,000 = -\$2,000$

Here, production did not exceed the base salary, so no bonus is earned for the quarter. Because URVet Care does not use negative accrual, the \$2,000 shortfall is not owed back and does not carry forward. Total compensation for the quarter remains the full base salary of \$25,000.

Your current production

To date, your invoice total for shifts worked with URVet Care is \$8,473.67. This will count toward your doctor-driven revenue for the quarter ending December 31, 2026.

Your terms

- General pay: \$250/hour
- On-call pay: \$300 one-time fee per call-in
- Production rate: 23%

Example 3:

Suppose you're called in on an on-call day for a surgery, you're in the building for 6 hours, and the surgery is invoiced at \$7,500. You would be paid:

- Hourly pay: $6 \text{ hours} \times \$250 = \$1,500$

- On-call fee: \$300
- Total for the call-in: \$1,800

The \$7,500 invoice would then be added to your other eligible invoices for the quarter to calculate any production bonus at 23%, as shown in the examples above.

I know production calculations can feel complicated, but this is the standard approach in our industry. In nearly 25 years in veterinary medicine, working in both private and corporate settings, this is the structure I've seen used most consistently. Furthermore, Amy will provide a generic template of our full-time doctor contract to show that all doctors within our practices follow the same payment structure as it pertains to production.

Please don't hesitate to reach out with any questions.

Best regards,

Cole Rice

Amy and the owner called me together on 9/13. On that call they said on-call is \$300 per hour, and if I come into the hospital I also receive the regular \$250 per hour. Those stack. Your email now calls on-call a \$300 one-time fee. That is not what they told me, and you do not change the rate after I already worked the overnight. ADP on the 25th will show \$9,900.00.

Sincerely yours, Yujin Kim

Dr. Kim,

Thank you for your email, and for working with us thus far. The team has thoroughly enjoyed your help while on shift. We appreciate your work and want to clear up what appears to be a misunderstanding about the rate discussed on the 9/13 call with Amy and Evan.

We offer the same compensation structure to nearly all of our per diem doctors. The only element that varies is the base hourly rate, which is set according to experience. The conversation with potential new doctors always follows the same outline. Under that structure, your compensation is:

- \$250 per hour for hours worked
- A one-time on-call fee of \$300, when applicable
- ProSal at 23%, paid quarterly

The on-call fee is a flat fee, not an hourly rate. A combined rate of \$550 per hour has never been offered and would not be offered to any doctor at our company, or at any outside hospital I'm aware of. That figure is well above what the veterinary industry pays; even board-certified specialists earn substantially less, including for on-call shifts. At that rate, the practice could not cover the costs that come with each case, such as medications, anesthesia, supplies, and support staff, in addition to our facility expenses.

URvet Care is consistently among the highest-paying veterinary groups in the New York City area, and one of the few that still offers a ProSal structure. We encourage you to compare our rates with others in the region.

Your pay will be processed according to company policy and the rates above, consistent with our standard agreement for all URvet Care doctors.

We value your expertise and hope to continue working with you. Please let us know if you have further questions.

Best regards,

Cole Rice
